High Quality is Cost Effective !

Dear Customer,

Since years, MEDSYS has been developing and manufacturing products in the field of women's healthcare for its growing base of customers and distributors throughout the world.

With experienced staff in high quality surgical instruments, the company aims to continue the century old tradition of cutlery and surgical instrument manufacturing - combining high quality and innovation - of the town of Gembloux, Belgium.

We are pleased to introduce our new enlarged product catalog : it focuses on electro-surgery, general surgery instruments and introduces a few very innovative laparoscopic devices developed with European opinion leaders.

It is our belief that our quality is cost effective : our reusable products will last because they are made of selected raw material, manufactured by experienced colleagues using appropriate equipment and according to international standards. MEDSYS provides a 1 year warranty on material and workmanship for all its reusable instruments and equipments, provided that the customer uses the products appropriately and applies "good maintenance practices" applicable to quality products.

MEDSYS' maintenance department provides further service for the repair of our surgical instruments and equipments. Don't hesitate to contact us for any question or troubleshooting related to the products.

As you read through this catalog, if you don't see what you need, please don't hesitate to contact our customer service department and ask for it. There is a good chance that our colleagues can accomodate your demand.

We thank you for your continued confidence and look forward serving you into the future.

Sincerely,

Yves Delpire
Managing Director

LapMan® Dynamic Laparoscope Driver

Get a stable image

Control your vision yourself

Make better use of your staff

“Control your vision yourself”

Introducing the LapMan® into the OR will :

Give back the surgeon the control of his vision

Improve image stability

Produce less eye fatigue

Free the Assistant for more rewarding tasks

Allow Solo Surgery

Features :

Rolling Base makes positioning easy, on either side of the operating table

Connection to laparoscope is easy, fast and scope independent

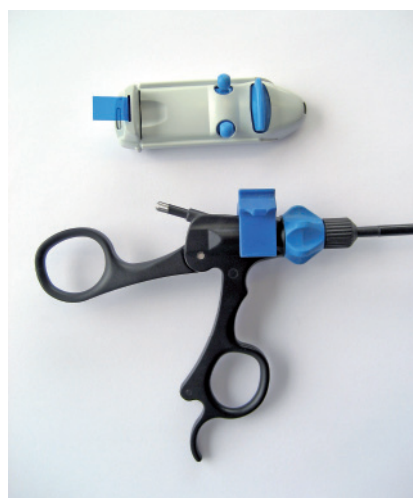

Set up takes less than 5 minutes

LapStick® :

Fits to any laparoscopic instrument (tailor-made clips)

Surgeon's index controls all scope movements

Sterile Disposable Device

Technical specifications

LapMan®

Weight : 50 Kgs

Dimensions :

Height : 1,2 - 1,5 m

Length : 0,7 m

Width : 0,36 m

LapStick®

Weight : 35 gr

Dimensions :

8,5 cm x 3 cm x 2 cm

SYS

Dequesne Lap Loop System

For laparoscopic total and subtotal hysterectomy

Safer : specifically designed system avoids possible damage by contact with surrounding tissues during sectioning.

Easier : once the Lap Loop is in place, the sectioning is performed in one single movement.

Faster : one movement replaces time consuming multiple incisions.

Video and publication⁽¹⁾ of Prof. J. DEQUESNE using Lap Loop System available on request

⁽¹⁾Dequesne J, Schmidt N, Foidart JM, Gaspart U, new applications for the Lap Loop in Laparoscopic Surgery. Ref Gynecol Obstet 8 : 537-42

The Lap Loop System comprises a reusable instrument and a disposable Loop.

Introducer

Sheath

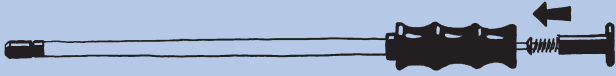

Electrode

Patent pending

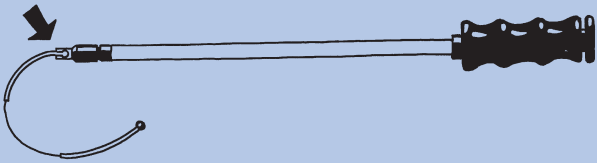

Procedure for use of Lap Loop System

1. Insert the introducer in the sheath.

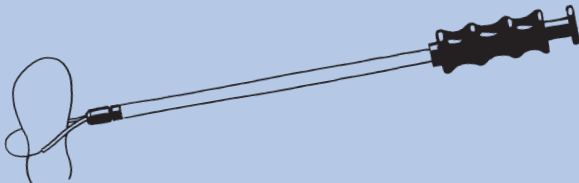

2. Push the introducer so that the distal tip extends out of the sheath and rotate the introducer to lock it in the sheath. (spring compressed)

3. Screw the screw thread end of the Lap Loop electrode into the female thread at the distal tip of the introducer .

4. Unlock the introducer and pull back the introducer until the entire Loop is withdrawn inside the sheath.

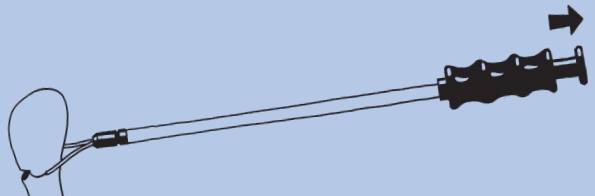

5. Insert the entire Lap Loop System through the trocar.

. Push the introducer so that the Loop is in the operating field. Compress spring, rotate and lock the introducer.

Position the Loop around the uterus.

Locate the ball end of the Loop electrode in the socket at the distal tip of the introducer, using forceps.

6. Rotate the introducer (spring decompressed) so that the Loop ends are completely withdrawn into the sheath.

Connect the monopolar cable adaptor and apply electrical current.

While maintaining the distal end of the sheath close to the uterus, pull back the introducer until uterus is sectioned, stop applying current and remove the monopolar cable adaptor.

Pull back the introducer until the entire Loop is in the sheath and remove sheath out of the trocar.

Remove the introducer out of the sheath, unscrew the Loop and discard it.

Order number :
110-030 Lap Loop instrument
120-060D Lap Loop Electrode (box of 5)

UTERINE MANIPULATOR

For laparoscopic hysterectomy

Anatomical :

design of the instrument allows LH in vast majority of cases

Easy :

- no complicated assembly or set-up prior to use
- cleaning and sterilisation as with standard instruments

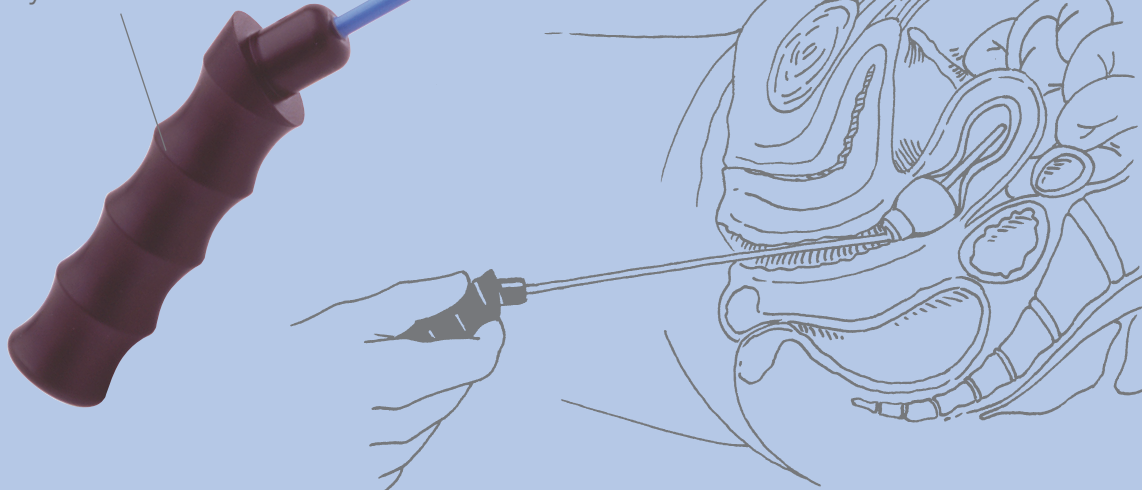

Quick :

learning curve for placing the uterine manipulator and use of the instrument is short

Cost effective :

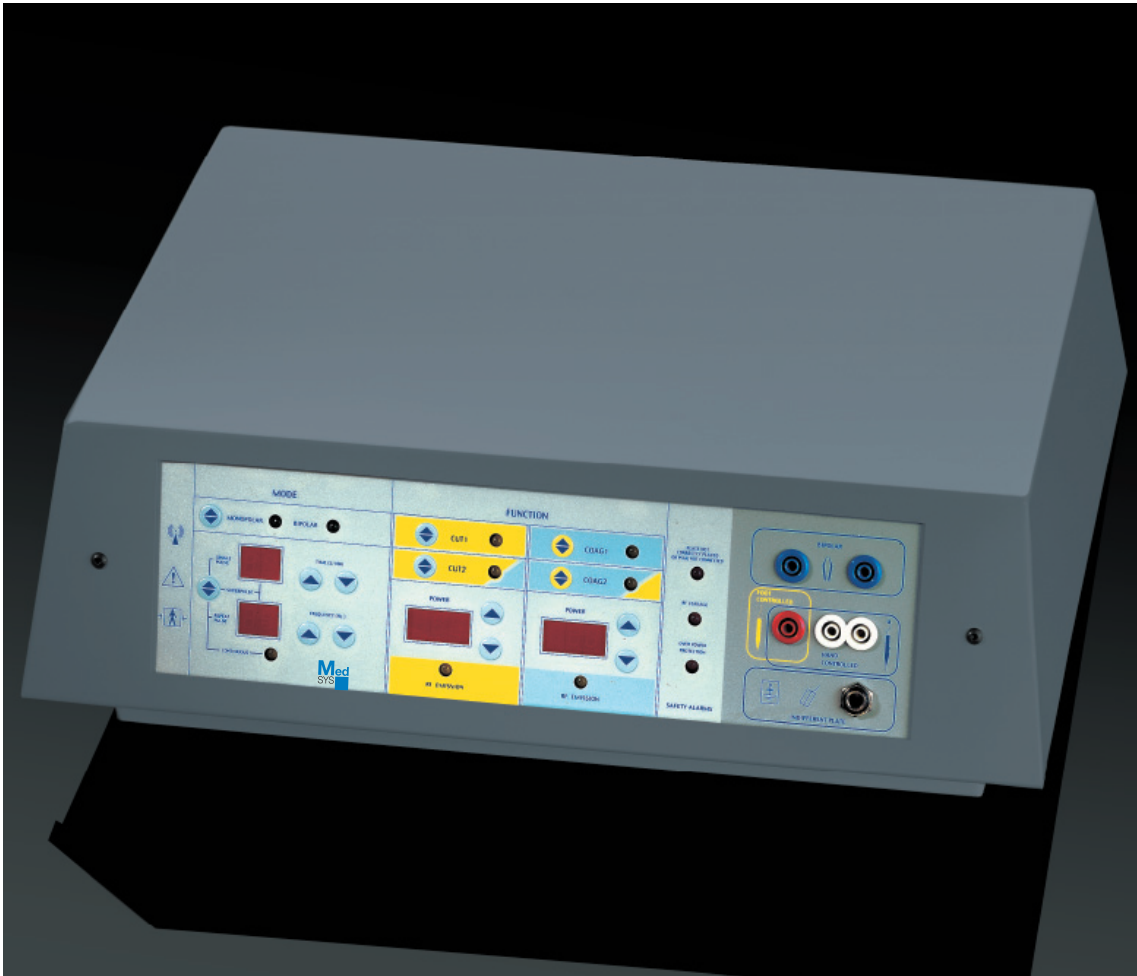

the device is fully reusable

Ergonomic handle for easy manipulation by the assistant

- Standard 3,5 cm internal diameter cup
- Transparent cup for visualisation during initial placement
- Cup design allows exposure of anatomical structures
- Isolated cup maintains pneumoperitoneum during most of colpotomy

Cervix dilators

Cervix Dilator Quick
Ref. 260-700
(box of 50)

Cervix Dilator Slow
Ref. 260-600
(box of 50)

- gentle dilation of the stenotic os
- use prior to hysteroscopy, placement of IUD, endometrial biopsy
- single use, sterile packed
- two models :
 - Cervix Dilator Slow
Ref. 260-600
dilates from 1,5 -> 6mm over 55mm.
 - Cervix Dilator Quick
Ref. 260-700
dilates from 1,6 -> 6mm over 45mm.

Endometrial Samplers and dilators

MES (Medsys Endometrial Sampler) (280-725)

- For maximum patient safety and comfort
- Optimum sample recovery
- 3mm plus O.D. for ample biopsy
- Double O-ring mechanism assures optimal suction

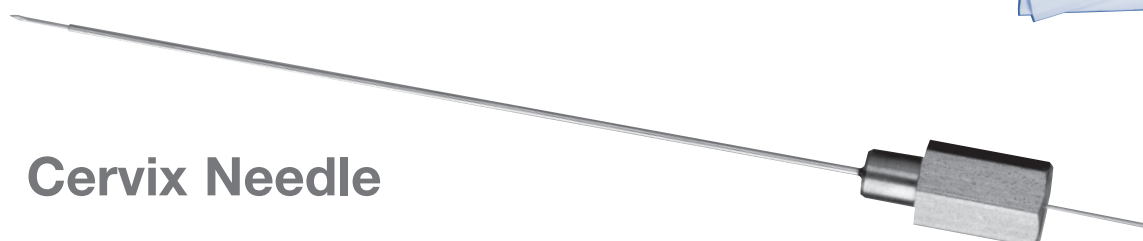

MES (Medsys Endometrial Sampler with Syringe) (280-655)

- Randall-like cutting edge assures sample
- Syringe provides extra vacuum
- Convenient 3mm O.D.
- Angled for left or right cornual selection

Cervix Needle

This needle was specifically designed to solve the problem of applying injections to the cervix. Distance and tough cervical tissue can make injection difficult with standard needles. With its reinforced and extended shaft, the Cervix Needle makes cervical application an easy procedure. The Cervix Needle only attaches to a "dental style" cartridge syringe.

Parametrium scissors are a complete set of parametrium scissors designed to match precisely to the special hysterectomy clamp jaw curvatures. The scissors guarantee precise cutting. The scissors feature a tungsten blade and a serrated blade to ensure grip during cutting. The scissors are available in three lengths and three jaw configurations.

336-603	30cm
336-663	35cm

All clamps available with angled or Gupta Frank-style shanks for greater scissoring space and clamping ability.

These clamps are well-balanced and have a sturdy, atraumatic longitudinal groove that guarantees a secure grip of tissue and prevents slippage. The hysterectomy clamps are available in four lengths and four jaw configurations.
